

How to add a WordPress audio player to Visual Composer

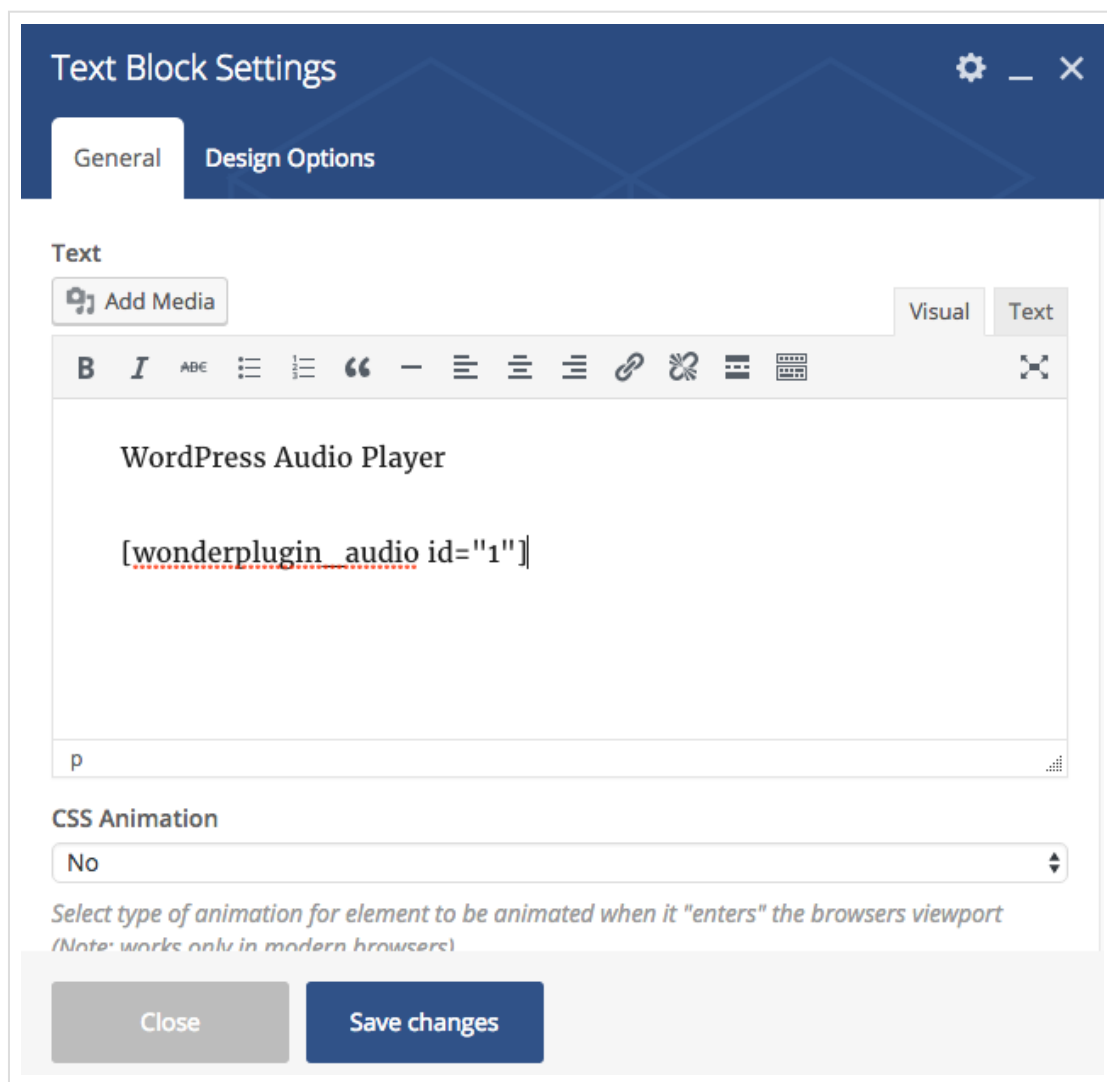

Posted on [August 12, 2016](#)

This tutorial will guide you how to add a WordPress audio player created with [WonderPlugin Audio Player](#) to the popular WordPress page builder [Visual Composer](#).

Step 1 - In Visual Composer page editor, click the Add Element button, then select the element Text Block.

Step 2 - Create an audio player with WonderPlugin Audio Player plugin, then add the player shortcode

Step 3 - Test the player in the published WordPress page or post

Update the page/post, visit your website and test the player in the published page/post. The player will not work inside the Visual Composer editor itself, both frontend and backend editors.
